Condensate After Cooler / Leg Assembly

Cemline Condensate After Cooler / Leg Assembly is designed to cool condensate or hot water.

The Cemline After Cooler assembly mixes hot water with cold water resulting in liquid temperatures acceptable for municipal sewage and per the local code. This packaged after cooler is perfect to be installed after a flash tank, blow down tank, or condensate receiver as condensate should be flashed before entering the condensate after cooler.

This unit is versatile as it can be supplied to be mounted either in a horizontal or vertical position.

The Cemline After Cooler is supplied with check valve, cooling valve, and thermometer. The self-acting thermostatic cooling valve can be field adjusted to the desired set point between 77°F and 150°F. The valve opens as temperature increases on the bulb.

**Standard Items**

- After Cooler Leg
- Check Valve
- Cooling Valve (1/2", 3/4", and 1")
- Thermometer

**Optional Features**

- Larger Cooling Valve (1-1/4", 1-1/2, or 2")
- Stainless Steel After Cooler Leg

The above information is based upon cooling the water to 140°F mixing 50°F cold water and assuming a 10 psi drop across the cooling valve.
