Construction of Cemline® Submerged Coils

Cemline Submerged Heating Coils are manufactured for use in storage tanks or steam generators which utilize steam, boiler water, solar water, or high temperature hot water as a heat source.

Cemline Submerged Heating Coils are used to heat water in storage tanks with steam, boiler water, solar water, or high temperature hot water passing through the coil, heating water in the tank.

Cemline standard coils are manufactured with 3/4" O.D. copper tubes suitable for 150 psi working pressure, 275° F maximum temperature. Coils for high pressure steam or high temperature boiler water are constructed of 90:10 cupro-nickel, and have a working pressure of 400 psi, and 450° F maximum temperature rating.

Cemline heating coils use the between the bolt tube sheet bolting arrangement to allow tighter gasket seating.

Cemline coils, as shown in this brochure, can be installed in any of the Cement Lined Storage Tanks (CST Series brochure) or Jacketed Storage Tanks (JST Series brochure).

Cemline Submerged Heating Coils are also available as replacement coils. See Cemline Replacement Tube Bundle (RTB Series) brochure for an easy guide to providing information to allow us to fabricate an exact duplicate of an existing coil or exchanger bundle.

Submerged Heating Coils

Standard Features

Cemline Submerged Heating Coils are manufactured to the highest standards. Each coil is built right the first time — and designed to last. Coils are available with standard equipment as outlined below, or can be built to customer order with optional extras.

Standard Submerged Coil	Features
Tube Sheet	Specific grade steel, precision drilled on latest numerically controlled machines to assure accurate spacing and geometry.
Tubes	Seamless deoxidized first quality copper tubes, precision bent and rolled into the tube sheet with torque controlled expander to assure proper tube seating every time.
Spacers	Copper spacers precision fabricated to keep tubes in perfect alignment.
Coil Heads	Close grain cast iron, cast in modern foundry and accurately machined to final dimensions.
Gaskets	Die cut, compressed gasketing material suitable for temperature up to 750° F
Bolts	Heavy bolts conforming to ANSI standards assures no leaks or stressing.
Testing	Each coil is individually hydrostatically tested to assure final quality.
Warranty	Each coil has a warranty for one (1) year.
Military Specifications	Coils confirm to latest military specifications.
Options Available	
Copper Lined Tube Sheet (Recommended for Domestic Water Heaters)	Economical, yet effective method of protecting water face of tube sheet. A 16 oz. copper sheet is bonded to steel tube sheet to assure a lifetime of rust free water.
Tubing	For those applications requiring, we can furnish 90:10 cupro-nickel, admiralty brass or stainless steel tubes, built with the same care and to the same quality standards as our standard coils.
Solid Brass or Other Non-Ferrous Tube Sheets	Available option, however, we recommend copper lined tube sheet as being the most suitable.
Fabricated Steel or Brass Head	For high pressure (400 psi) or corrosive fluids.
400# Working Pressure at 450° F.	Cemline coils can be fabricated for 400 psi working pressure at 450° F for high temperature hot water.

Recovery Systems Steam Heating Medium

The listing below is for various steam pressures with 40-140° F temperature rise on the recovery side. Coils are available for other steam pressures and/or different temperature rises. Please refer to conversion chart on page 5 or consult factory or local representative for further information.

GPH Water Heated 40-140° F — 100° F Temperature Rise

Conversion Table — Steam Factors to Calculate Variations in Temperature Rises

The table as shown is to aid in sizing the proper Cemline coil required when conditions vary from 40-140° F. temperature rises shown on Recovery System chart (page 4).

		Conversion Factor							
Inlet Temperature °F	Outlet Temperature °F	Steam Pressure (PSI)							
		0	2	5	10	15	25	50	100
40°	80°	3.32	3.30	3.24	3.06	3.09	3.00	2.89	3.07
	100°	2.05	2.03	2.02	1.92	1.94	1.90	1.83	1.81
	120°	1.25	1.03	1.38	1.35	1.35	1.35	1.31	1.29
	140°	1.00	1.00	1.00	1.00	1.00	1.00	1.00	1.00
	160°	.73	.74	.75	.74	.78	.77	.78	.78
	180°	.53	.54	.55	.57	.59	.60	.63	.64
50°	80°	4.32	4.30	4.22	4.00	4.04	4.00	3.80	3.74
	100°	2.40	2.38	2.35	2.55	2.26	2.23	2.15	2.15
	120°	1.55	1.55	1.55	1.51	1.52	1.52	1.47	1.46
	140°	1.10	1.10	1.11	1.07	1.09	1.08	1.08	1.08
	160°	.78	.79	.80	.80	.81	.83	.83	.85
	180°	.55	.56	.57	.61	.61	.65	.67	.67
60°	80°	6.25	6.20	6.15	5.80	5.91	5.88	5.58	5.52
	100°	2.88	2.88	2.87	2.72	2.78	2.73	2.64	2.64

	140°	1.18	1.18	1.20	1.16	1.18	1.20	1.19	1.20
	160°	.82	.84	.87	.84	.87	.88	.89	.92
	180°	.55	.57	.62	.63	.65	.68	.69	.72

To convert FROM other temperature conditions to 40-140° F temp. rise:

FORMULA: Factor divided into GPH at desired temp. rise = GPH at 40-140° F temp. rise.

Example #1 (using 5 psi steam)

400 GPH @ 40-180° F temp. rise
Factor (see chart) — .55
400 GPH ÷ .55 = 727 GPH, 40-140° F temp. rise

Select Cemline coil no. 642 or 830 coil
(closest GPH to 727 which will fit into storage tank selected)

Example #2 (using 5 psi steam)

500 GPH @ 60-140° F temp. rise
Factor (see chart) — .120
500 GPH ÷ 1.20 = 417 GPH, 40-140° F temp. rise

Select Cemline coil no. 460 or 624 coil
(closest GPH to 417 which will fit into storage tank selected)

To convert FROM 40-140° F temp. rise TO other temperature conditions:

FORMULA: Factor multiplied by GPH at 40-140° F temp. rise = GPH at desired temp. rise.

Example #1 (using 10 psi steam)

600 GPH, @ 40-160° F. temp. rise
Factor (see chart) — .74
600 GPH x .74 = 444 GPH, 40-160° F temp. rise

Select Cemline coil no. 484 or 636 coil
(the coil will supply 600 GPH, 40-140° F. or 444 GPH, 40-160° F.)

Recovery Systems Boiler Water — Heating Medium

The listing below is for various boiler water and high temperature hot water heating mediums when used with 40-140° F temperature rise on the recovery side. Coils are available for other temperatures not listed and/or different temperature rises. Please refer to conversion chart on page 7.

GPH Water Heated 40-140° F. — 100° F. Temperature Rise

Conversion Table — Boiler Water Factors to Calculate Variations in Temperature Rises

The table as shown is to aid in sizing the proper Cemline coil required when conditions vary from 40-140° F temperature rises shown on Recovery System chart (page 6).

Inlet Temperature °F	Outlet Temperature °F	Conversion Factor			
		Boiler Water Temperature °F			
		180°	190°	200°	212°
40°	80°	3.78	3.60	3.40	3.25
	100°	2.28	2.20	2.11	2.04
	120°	1.50	1.45	1.42	1.39
	140°	1.00	1.00	1.00	1.00
	160°	.56	.62	.64	.71
	180°	—	—	.42	.46
50°	80°	4.89	4.60	4.42	4.11
	100°	2.61	3.50	2.42	2.32
	120°	1.61	1.58	1.56	1.54
	140°	1.06	1.06	1.06	1.07
	160°	.61	.64	.68	.75
	180°	—	—	.43	.50
60°	80°	7.22	6.90	6.50	6.10
	100°	3.11	3.01	2.92	2.82
	120°	1.78	1.76	1.74	1.71
	140°	1.11	1.12	1.13	1.14
	160°	.61	.65	.69	.79
	180°	—	—	.43	.50

For high temperature hot water variations — please consult factory.

To convert FROM other temperature conditions to 40-140° F temp. rise:

FORMULA: Factor divided into GPH at desired temp. rise = GPH at 40-140° F temp. rise.

Example #1 (using 200° F boiler water)

400 GPH @ 40-160° F temp. rise
 Factor (see chart) — .64
 $400 \text{ GPH} \div .64 = 625 \text{ GPH}$, 40-140° F temp. rise

Select Cemline coil no. 666 or 842 coil
 (closest GPH to 625 which will fit into storage tank selected)

Example #2 (using 180° boiler water)

350 GPH @ 60-160° F temp. rise
 Factor (see chart) — .61
 $350 \text{ GPH} \div .61 = 574 \text{ GPH}$, 40-140° F temp. rise

Select Cemline coil no. 684 or 848 coil
 (closest GPH to 574 which will fit into storage tank selected)

To convert FROM 40-140° F temp. rise TO other temperature conditions:

FORMULA: Factor multiplied by GPH at 40-140° F temp. rise = GPH at desired temp. rise.

Example #1 (using 200° F boiler water)

1500 GPH, @ 50-140° F temp. rise
 Factor (see chart) — 1.06
 $1500 \text{ GPH} \times 1.06 = 1590 \text{ GPH}$, 50-140° F temp. rise

Select Cemline coil no. 884 or 1060 coil
 (the coil will supply 1500 GPH, 40-140° F or 1590 GPH, 50-140° F)

Cemline® Submerged Coils

Cemline coils are furnished with dimensions as shown below.

Coil Size	Steam/Boiler Water 150 PSI Maximum Working Pressure Cast Iron Head					High Pressure Steam/High Temperature Hot Water 400 PSI Maximum Working Pressure Fabricated Steel Head

Coil lengths are shown on recovery system charts (pages 4 & 6)

Refer to Section I, and Section II of the Cemline catalog for a complete guide to sizing and selecting a storage tank for use with a submerged heating bundle. Section I describes un-insulated tanks, and Section II describes tanks which feature the convenience of factory insulation and enameled steel jacket. Both type tanks are ASME Code constructed and stamped and are provided with Cemline's exclusive Stonesteel® lining. Stonesteel® lining has proven over 50 years to be the most effective lining made to protect the inner tank surface from rust and corrosion and prevent failure of hot water storage tanks and hot water generators.

To replace an existing bundle see "Cemline Replacement Tube Bundle" catalog section.
